

READY. SET. WRENCH.

Or inspect, check, test, investigate, diagnose, adjust, cut, weld – whatever it takes to ensure those linked to the land are up and running to move earth.

The time to **run your world** is now.

The John Deere Construction & Forestry Technician program joins accredited colleges and universities with John Deere dealers to provide you with relevant classroom teaching. Teaching that gets combined with critical hands-on job experience.

This program is designed to get you to work now - by merging learning and application of skills within a real work environment - giving you the experience you need for a successful career in this highly technical and rapidly growing field.

CONSTRUCTION & FORESTRY TECH PROGRAM

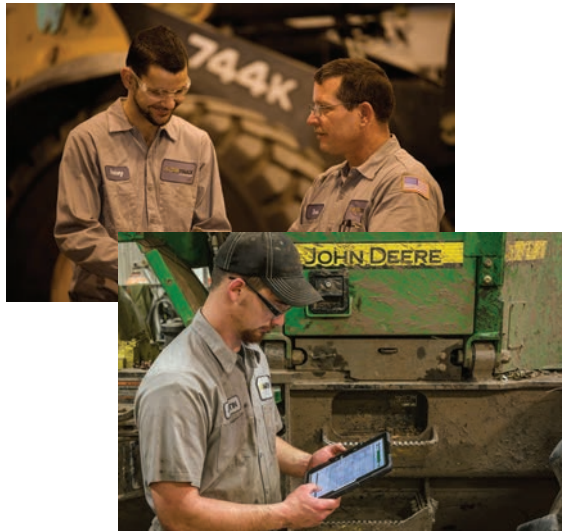

JOHN DEERE

DEERE.COM/CFTECH

POWERFUL REASONS TO CHOOSE THE C&F TECH PROGRAM

DESIGNED TO BUILD CAREERS

John Deere Construction & Forestry has partnered with schools across the country to offer a two-year associate's degree program that is designed to give you the inside track toward a successful career. Participating program instructors and dealer personnel are committed to providing you with the high-quality training required to establish long, rewarding careers with John Deere dealerships.

PROGRAM COURSES

- Diesel engines
- Powertrains
- Brakes
- Electrical and hydraulic systems
- Computer diagnostics
- Proprietary John Deere systems
- Training on John Deere product lines
- Shop procedures and safety
- General education instruction

GET EXPERIENCE

Get to work. Get experience. Get paid. You'll work at a sponsoring John Deere dealership as part of the curriculum. And get paid for it.

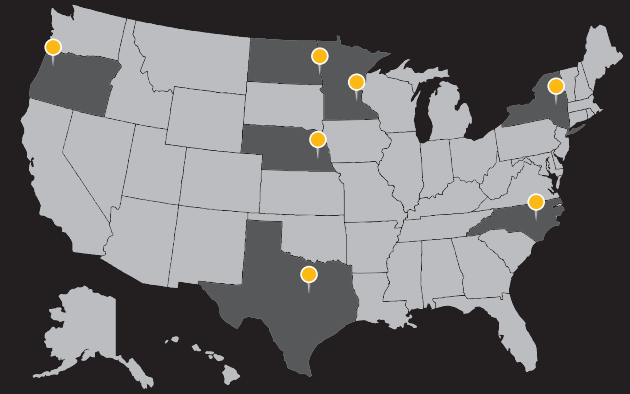

The dealership is where classroom lessons are put into practice. You'll learn from some of the best certified John Deere technicians in the business while working on real jobs and dealing with real customers. You'll be depended on by high-performance customers who need their equipment fixed right. And fixed right now.

Time spent working at the dealership will be challenging, but also rewarding. This will be where you put everything you know about John Deere diesel engines, powertrains, electronics, and diagnostics to work and learn that you really can fix a machine with just a laptop and a wrench. You'll also discover how your skills affect everyone you come into contact with, from customers to coworkers. It's this real-life experience that puts our graduates in demand.

Graduates have instant dealer impact, with high retention rates, and great earning potential.

SCHOLARSHIPS & FINANCIAL ASSISTANCE

The cost of the program varies by school, as do the scholarships and the financial assistance options that are available. Financial aid counselors at program institutions, and sponsoring dealerships, will be able to provide additional information on what financing options are available for each location's program.

The John Deere Construction & Forestry Tech Program is available in several locations from the West Coast to the East Coast:
